

DURA-WALK® CWH

A high-performance hot rubberized asphalt seamless waterproofing membrane for between slab waterproofing applications that is not only strong and dependable, but also easy to use. Dura-Walk CWH is ideal where it is necessary to add a layer of hidden waterproofing between two layers of concrete (or other material) such as parking structures, terraces, green roof systems and more.

Quick Info:

- Extremely flexible
- Dependable waterproofing
- Quick curing
- Sag resistant
- Versatile

DURA-WALK® CWH

MORE EXPLANATION

The top attributes of Dura-Walk CWH and why they matter to you.

Quick Curing – Dura-Walk CWH contains 100% solids, so the material cures almost immediately upon application.

Why it matters – The material cools and hardens quickly, minimizing down time and speeding up the overall project time line while still achieving a high-build system. The 100% solids formula does not shrink during curing, so applicators have complete control of system thickness.

Highly Sag Resistant – This asphalt-based formula is thick, and does not thin out even at hot application temperatures. This formula can even bridge cracks up to twice as wide as similar products, up to 1/8” wide.

Why it matters – Dura-Walk CWH applies easily. New coats can be applied to previous coats without requiring rigorous surface preparation, which makes Dura-Walk CWH easy to build up into a thick, durable system – even while taking fewer steps than other systems.

High Rubber Content – The high volume of premium rubber used in this formula helps Dura-Walk CWH maintain its elastomeric and elongation properties.

Why it matters – This strength and flexibility means that the compound won't become brittle or crack as it ages like other materials, keeping the system watertight for years to come.

Optimal Rubber Dispersion – Superior chemistry and rigorous testing ensure that Dura-Walk CWH achieves optimal rubber dispersion, as proven by its extremely high softening point.

Why it matters – The better the rubber dispersion, the longer a coating will retain elasticity, adhesion, and strength. The flexible material allows the system to remain watertight for many years.

Backed by a 10-Year Limited Warranty – Due to the distinctive benefits of this product, we are able to offer a warranty on approved Dura-Walk CWH installations.

Why it matters – Have complete confidence that your structure is watertight and protected with this system incorporating hot rubberized asphalt, reinforcement (HPR® Polyscrim Plus) and the protective layer of your choice. Warranty is applicable to qualifying structural concrete substrates with a 1/8:12 minimum slope.
