

# Metal Roof Restoration Coating

# CPR™ Coating

CPR Coating is a synthetic liquid rubber membrane designed to provide a durable, waterproof defense for metal roofs and walls. Its high elasticity and tensile strength ensure long-lasting protection and performance across extreme temperatures.

## Exceptional Durability & Resilience

- Forms a rubber-like monolithic membrane over the entire surface
- Has exceptional resistance to UV damage and deterioration due to weathering.
- Remains elastic regardless of the temperature

## Sustainable & Cost-Effective

- Fluid-applied restoration saves 50% and reduces landfill waste.
- Highly reflective, shielding the roof from UV damage and helping to reduce cooling costs.
- Ensures sustainable, low-cost roof maintenance.

## Versatile Application

- Compatible with most metal roof surfaces and materials.
- Provides excellent protection against UV and deterioration.
- Easily applied over sloped surfaces to provide waterproofing.

**Long-lasting, waterproof protection for sloped and contoured surfaces.**

**Elastic, rubber-like membrane expands and contracts with substrate movement.**

**Lightweight system drastically reduces dead weight compared to conventional systems.**

# Metal Roof Restoration Coating

## CPR™ Coating

### Features & Benefits

#### Proven System Longevity

**Exceptional UV and weathering resistance**

Provides excellent protection against UV and deterioration.

**Elastic rubber-like membrane**

Expands and contracts with the movement of the substrate and remains elastic in extreme temperatures.

#### Cost-Saving Performance

**Efficient, less disruptive installation**

Requires less labor and material than a replacement, keeping project costs down and your facility running smoothly.

**Highly reflective white option**

Offers long-term cost benefits that include lower life-cycle costs and energy savings.

#### Versatile & Reliable Installation

**Sloped and contoured surface application**

Can be applied on most types of metal roof construction materials and surfaces, regardless of slope.

**Fully-adhered elastomeric system**

Cures to a durable, weatherproof, and fully-adhered elastomeric membrane when combined with CPR Seam Sealer and metal seam reinforcement fabric.

**CPR™ Coating**  
**Durable, seamless waterproofing for metal roofs.**

### Advantages of CPR Coating

Long-Lasting  
Waterproof Protection

Exceptional UV Resistance

Elastic and Resilient

Lightweight Application

Lower Life-Cycle Costs
