

Metal | Standing Seam

R-Mer Span

The R-Mer Span standing seam roof system is structurally sound, functionally versatile and has provided decades of proven performance resisting damage from wind and water penetration.

Exceptional aesthetics

- Outstanding curving ability
- Minimized "oil canning"
- 2 3/8" high vertical seam

Superior performance

- One-piece clip design allows for unlimited thermal movement
- Excellent ventilation reduces possibility of condensation
- Water barrier isolated from clip

Versatile uses

- Retrofit over virtually any existing roof systems
- Spanning capability on slopes down to 1/4:12
- Wide array of colors, sizes, gauges, and metals

Satisfy the most ambitious design vision.

A perfect balance of performance and value.

Watertight protection day-to-day, year-to-year, decade-to-decade.

Metal | Standing Seam

R-Mer Span

Features & Benefits	
Exceptional aesthetics	
Outstanding curving ability	R-Mer Span boasts the tightest curving capability in the industry for structural panels. Steel can be curved to a 20-ft radius, and aluminum to a 10-ft radius.
Minimized “oil-canning”	R-Mer Span consists of a unique profile containing mesas throughout the panel. These mesas reduce the appearance of “oil-canning,” a common issue with metal roofing as it ages.
High vertical seam	The 2 3/8” high seams in R-Mer Span are both aesthetically pleasing and also an ideal roof system to withstand extreme weather conditions.
Superior performance	
Unlimited thermal movement	R-Mer Span’s heavy-duty, 16-gauge, one-piece continuous clip design allows for unlimited expansion and contraction as the ambient temperature changes.
Reduced condensation	The 3/8” high clearance between the R-Mer Span panel and the substrate below enables ventilation, thereby reducing the possibility of condensation.
Isolated water barrier	The double bead of factory applied hot melt sealant that serves as a water barrier is completely isolated from the clip, protecting the sealant from wear and improving the longevity of the system.
Versatile uses	
Retrofit over many systems	R-Mer Span is ideal for retrofits over existing single plies, built-up roofs, modified bitumen, or existing metal roofing.
Wide range of options	R-Mer Span is available in 12, 16, or 18” wide panels, in 20, 22, or 24-gauge steel or .032, .040, or .050 aluminum, copper, stainless steel or zinc; and in a wide palette of colors.

R-Mer Span is certified by
FM • UL • Miami-Dade •
Cool Roof Rating Council*

** Based on qualified colors*

Advantages of R-Mer Span

Excellent Curvability

Minimized “oil-canning”

Unlimited expansion & contraction

Proven watertight performance

Virtually limitless options
