

# StressPly® IV Plus

The StressPly IV Plus torch applied membranes are modified with SBS rubber and incorporate a high strength reinforced polyester/fiberglass scrim. StressPly IV Plus membranes combine the inherent advantages and proven performance of multi-ply protection with the strength, flexibility and elongation of elastomeric systems combined with today's torch applied technology.

### Clean Environmentally Friendly Application

Torch applied systems eliminate the reliance on hot applied bitumen or solvent-based adhesives.

### Minimal Equipment

StressPly IV Plus systems utilize torching equipment eliminating kettles, asphalt fumes and equipment staging areas.

### Strength & Aesthetics

StressPly IV Plus provides unsurpassed industry strength, matched with a clean monolithic appearance with no mess or stains.

# StressPly® IV Plus

## Features

## Benefits

### **Torch-Applied**

Ideal for hospitals, schools or roofs with limited access and staging areas. Torching equipment eliminates kettles, asphalt fumes and reduces the amount of equipment on or around the building

### **Superior Strength**

StressPly IV Plus membrane provides tensile strength in excess of 300 lbs. per inch in the machine and cross machine direction. This translates to long term resistance to splits and tears in completed StressPly IV Plus roof systems

### **Long-Term Security**

Combining the strength and proven performance of a multi-ply configuration with the durability, flexibility and elongation of an elastomeric roofing system translates into a roofing system that can stand up to the test of time

### **Exceptional Durability**

SBS rubber provides superior low-temperature flexibility and long-term weathering characteristics resulting in a membrane has superior performance in wide range of environmental conditions.

### **Extended Roof Surface Life**

UV Mineral option offers a highly reflective mineral surface that provides exceptional protection against destructive UV rays, while significantly lowering surface temperatures resulting in energy cost reductions
