

R-Mer Lite® II Seam Bar

OVERVIEW & FEATURES

The R-Mer Lite II Seam Bar is an aircraft grade aluminum extrusion designed specifically for the R-Mer Lite II roof system. The seam bar's design provides a secondary watertight seal along the leading edge of the R-Mer Lite panel seams. It protects both the butyl seam tape from UV damage and the edge of the metal panel from corrosion. This bar also acts like a compression bar that evenly distributes the force of the R-Mer Lite II fasteners along the entire seam. The bar's pre-punched holes also act as a spacing guide for ease of fastener installation.

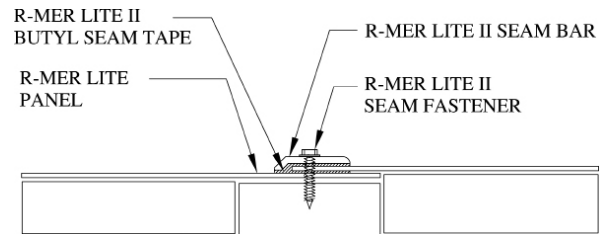

APPLICATION

Once the R-Mer Lite II butyl tape is in place, the R-Mer Lite II Seam Bar is installed over the lapped edges of the panel, covering the seam tape. Once the bar is in place, the R-Mer Lite II fasteners should be installed as specified.

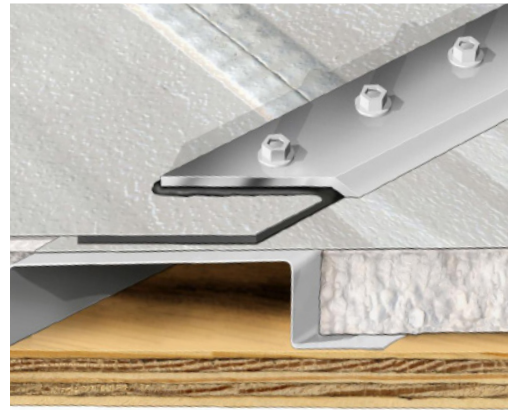

TECHNICAL PROPERTIES

The R-Mer Lite II Seam Bar is an aircraft grade aluminum alloy extrusion with a white corrosion resistant coating. It is available in 12' lengths with pre-punched holes sized specifically for the R-Mer Lite II fastener. The holes are spaced every 2" o.c. for typical applications and 1-1/4" o.c. for FM insured projects.
